

# S3Z SERIES INSTRUCTION MANUAL

## CONTROLS

### OUTPUT LED

The yellow LED indicates the output status.

### STABILITY LED (S3Z...B01/C01/C11/F01)

The green LED ON indicates that the received signal has a safety margin greater than 20% compared to the output switching value.

### POWER ON LED (S3Z...G00)

The green LED indicates that the sensor is operating.

### TRIMMER (S3Z...B01/C01/C11/F01/T51)

The trimmer can be used to adjust sensitivity; the operating distance increases turning the trimmer clockwise.

### ADJUSTMENT SCREW (S3Z...M)

This control can be used to adjust the cutoff distance (6 turns screw); the operating distance increases turning the control clockwise.

### WARNING ONLY FOR TRIMMER (S3Z...B01/C01/C11/F01/T51)

**MODEL:** The trimmer rotation is limited to 260° by a mechanical stop.  
*Do not apply excessive torque when adjusting (max 0.05 Nm).*

## INSTALLATION

The sensor can be positioned by means of the two housing's threaded holes (M3) using two screws (M3x12 or longer or M2.5 passing screw, 0.5 Nm maximum tightening torque) with washers. Various orientable fixing brackets to ease the sensor positioning are available (please refer to the accessories listed in the catalogue).

### Alignment S3Z...B01/T51

Position the sensor and reflector on opposite sides. Turn the sensitivity trimmer to maximum. Find the points where the yellow LED (OUT) is switched ON and OFF in both vertical and horizontal positions, and fix the sensor in the centre between these points.

Optimum operation is obtained when the green LED is ON. If necessary, reduce sensitivity using the trimmer, in order to detect very small or transparent targets. In order to improve alignment, repeat the procedure detailed above whilst progressively reducing the sensitivity.

### Alignment S3Z...F01/G00

Position the sensors on opposite sides.

Find the points where the yellow LED (OUT) is switched ON and OFF in both vertical and horizontal positions, and fix the sensor in the centre between these points.

Optimum operation is obtained when the green LED is ON.

### Alignment S3Z...C01/C11 (LIGHT mode)

Position the sensor and turn the sensitivity trimmer at minimum:

the green LED is ON and the yellow LED is OFF.

Place the target opposite the sensor.

Turn the sensitivity trimmer clockwise until the yellow LED turns ON (*Target detected state, pos.A*).

Remove the target, the yellow LED turns OFF. Turn the trimmer clockwise until the yellow LED turns ON (*Background detected state, pos.B*). The trimmer reaches maximum if the background is not detected. Turn the trimmer to the intermediate position C, between the two positions A and B. The green LED must be ON.

For S3Z...C01/C11 models in DARK mode, the OUTPUT LED and the output are inverted.

### Alignment S3Z...M

Position the sensor and turn the adjustment screw to maximum.

Place the target opposite the sensor at a slightly greater distance than desired. Turn the screw counterclockwise until the sensor switches.

Verify the adjustment moving the target closer and further the sensor; tune the adjustment if necessary.

It is recommended to operate with the stability LED turned ON.
