Specifications

Optical data
- Measurement range: 50 ... 650mm
- Resolution: 0.1 ... 0.5mm
- Light source: laser
- Wavelength: 655nm
- Light spot: divergent, 1x1mm² at 450mm
- Max. output power: 1.2mW
- Pulse duration: 22ms

Error limits (relative to measurement distance)
- Absolute measurement accuracy: ± 1%
- Repeatability: ± 0.5%
- B/W detection threshold: (6 ... 90% rem.): ≤ 0.5%
- Temperature compensation: yes

Timing
- Measurement time: 2ms
- Response time: ≤ 6ms
- Delay before start-up: ≤ 300ms

Electrical data
- Operating voltage: UB = 18 ... 30V (incl. residual ripple)
- Residual ripple: ≤ 15% of UB
- Open-circuit current: ≤ 180mA

Sensor operating mode
- IO-Link: COM2 (38.4kBaud), Frame 2.2, Vers. 1.0, min. cycle time 2.2ms
- SIO: not supported

Indicators
- Green LED: continuous light off, ready, no voltage
- Yellow LED: continuous light off, object within measurement range

Mechanical data
- Housing: plastic
- Optics cover: glass
- Weight: approx. 50g
- Connection type: M12 connector, 5-pin

Environmental data
- Ambient temp. (operation/storage): -20°C ... +50°C / -30°C ... +70°C
- Protective circuit: 1, 2, 3
- VDE safety class: II, all-insulated
- Protection class: IP 67
- Laser class: 2 (according to EN 60825-1 and 21 CFR 1040.10 with Laser Notice No. 50)
- Standards applied: IEC 60947-5-2

16 bit measurement value: distance
1 bit output resolution: 0.1 mm
Signal too weak: 65535
Laser error: 65533
IO-Link service data

Sensors with IO-Link interface can be configured and diagnosed via the service data.

Parameters

Measure mode

A measurement mode for adapting to the application task can be activated with this parameter. There is a selection of four measurement modes (standard, precision, speed and light suppression). By selecting the mode, the following results are achieved:

- **Standard**: standard setting
- **Precision**: high accuracy, approx. 95% slower
- **Speed**: fast measurement, approx. 30% faster
- **Light suppression**: higher immunity against external light interference

The following table provides an overview of the effects of the individual parameters on the measurement function.

<table>
<thead>
<tr>
<th>Measure mode</th>

<td>0</td>
</tr>
</tbody>
</table>

Measurement filter

A measurement filter for adapting to the application task can be activated with this parameter. There is a selection of three options (off, averaging, center value). By selecting the filter, the following results are achieved:

- **Off**: no filtering of the measurement values
- **Averaging**: a moving average from the last 2 … 99 measurement values (setting of the number with measure. count) is calculated and output. If the measurement value changes abruptly, the output value moves linearly over n measurements from the old to the new measurement value. The time until the measurement value is updated is therefore not affected by the number of measurements; the response time for distance changes slows down.
- **Center value**: filtering out of extreme values - the average is calculated from 10 … 50 individual measurements. The number of individual measurements used for this purpose is selected via measure. count (10, 20, 30, 40 or 50). The setting under filter depth specifies whether only the most extreme (coarse), the middle (medium) or the lowest deviations (fine) should be filtered out.

The following table provides an overview of the effects of the individual parameters on the measurement function.

<table>
<thead>
<tr>
<th>Filter</th>

</tbody>
</table>

Number of measurement values (averaging)

This parameter defines the number of individual measurements which are used for filtering.

Number of measurement values (center value)

This parameter defines the number of individual measurements which are used for filtering.

Filter depth (center value)

This parameter defines the filter gauge (medium, coarse, fine).

Display

This parameter determines the display setting on the sensor (on, off, auto).

Button lock

This parameter determines whether the key pad on the sensor is locked or activated.
System commands:

**Laser transmitter activation**
This system command switches on the laser transmitter.

**Laser transmitter deactivation**
This system command switches off the laser transmitter. If the sensor is deactivated, the last measurement value detected is frozen. The state of the laser can be seen from the sensor status.

**Setting to factory setting**
This system command restores the factory settings of the sensor.

Diagnostics (observation)

**Signal too weak [process value 65535] or laser failure [process value 65533]**
Reception signal is not sufficient: either no object is in the measurement range or the signal from the object is too weak for detection. A displayed laser failure signalizes interference of the laser light source.

**Signal warning**
Low reception signal: the object is not detected reliably, e.g. because the signal from the object is very weak.

**Laser activation**
Status information on whether the laser transmitter is activated or deactivated.

**Measurement range sensor**
Status information on whether an object is located in the measurement range of the sensor.

**Notice!**
If parameters are changed on the device via the display and keyboard, the master is not signaled. In the event the master sends an explicit request, however, the changed value is available.

**Notice!**
Detailed information about the IO-Link service data and the IODD can be found at Leuze website.
Attention Laser Radiation!

The ODSL 9 optical distance sensors operate with a red light laser of class 2 acc. to EN 60825-1. If you look into the beam path over a longer time period, the retina of your eye may be damaged!

Never look directly into the beam path! Do not point the laser beam of the ODSL 9 at persons!

When mounting and aligning the ODSL 9 take care to avoid reflections of the laser beam off reflective surfaces!

The use of operating and adjusting devices other than those specified in the technical description, carrying out of differing procedures, or improper use of the optical laser distance sensor may lead to dangerous exposure to radiation!

The use of optical instruments or devices in combination with the device increases the danger of eye damage!

Adhere to the applicable legal and local regulations regarding protection from laser beams acc. to EN 60825-1 in its latest version.

The ODSL 9 uses a laser diode with low power in the visible red light range with an emitted wavelength of about 655nm.

The glass lens cover is the only opening through which the laser radiation can escape from the device. The housing of the ODSL 9 is sealed and has no parts that need to be adjusted or maintained by the user. The device must not be tampered with and must not be changed in any way! Unauthorized opening of the device voids the warranty!

Notice!

It is important to attach the stick-on labels delivered with the device (notice signs)! If the signs could be covered due to the installation location of the ODSL 9, attach them close to the ODSL 9 so that it is not possible to look into the laser beam when reading the notices!

- Configuration software
- Cable with M12 connector (K-D …)
- Connection cable for MA2xx/ (K-DS M12A-MA-5P-3m-S-PUR, Part no. 50115049)

**Electrical connection**

- ODSL 9/66…
  - 10–30 V DC +
  - 1 br/BN
  - 2 ws/WH
  - 3 bl/BU
  - 4 sw/BK
  - 5 gr/GY

- ODSL 9/C66…
  - 10–30 V DC +
  - 1 br/BN
  - 2 ws/WH
  - 4 sw/BK
  - 5 gr/GY

- ODSL 9/C6…
  - 10–30 V DC +
  - 1 br/BN
  - 2 ws/WH
  - 5 gr/GY

- ODSL 9/D36…
  - 10–30 V DC +
  - 1 br/BN
  - 2 ws/WH
  - 5 gr/GY

- ODSL 9/V6…
  - 10–30 V DC +
  - 1 br/BN
  - 2 ws/WH
  - 5 gr/GY

- ODSL 9/V66…
  - 10–30 V DC +
  - 1 br/BN
  - 2 ws/WH
  - 5 gr/GY

**Dimensioned drawing**

- **A** Reference edge for the measurement
- **B** Optical axis
- **C** Device plug M12
- **D** Receiver
- **E** Transmitter
- **F** LCD display
- **G** Indicator diode yellow
- **H** Indicator diode green
- **J** Control buttons
Specifications

Optical data
Measurement range 1) 50 … 450 mm
Resolution 0.1 mm
Light source laser
Wavelength 655 nm
Light spot divergent, 1x1 mm² at 450 mm
Laser warning notice see remarks

Error limits (relative to measurement distance)
Absolute measurement accuracy 1) ± 1%
Repeatability 2) ± 0.5%
B/W detection thresh. (6 … 90% rem.) ≤ 0.5%
Temperature compensation yes 3)

Timing
Measurement time 2 ms 1)
Response time ≤ 6 ms
Delay before start-up ≤ 300 ms

Electrical data
Operating voltage \( U_B \) ...C6/C66/V6/V66 ...D26/D36/66 18 … 30 VDC (incl. residual ripple)
Residual ripple ≤ 15% of \( U_B \)
Open-circuit current ≤ 180 mA
Switching output push-pull switching output 4), PNP light switching, NPN dark switching
Signal voltage high/low Analog output ...V6/V66 ...C6/C66 ...D26/D36 voltage 1 ... 10 V / 0 ... 10 V / 1 ... 5 V / 0 ... 5 V, \( R_i \) ≥ 2 kΩ
current 4 ... 20 mA, \( R_i \) ≤ 5 kΩ
Serial interface ...D26/D36 RS 232/RS 485, 9600 ... 57600 Bd,
Transmission protocol 1 start bit, 8 data bits, 1 stop bit, no parity

Indicators
Green LED continuous light ready Teach-in on GND
flashing fault teaching procedure
Yellow LED continuous light object inside teach-in measurement distance light
flashing teaching procedure
off object outside teach-in measurement distance

Mechanical data
Housing plastic
Optics cover glass
Weight approx. 50 g
Connection type M12 connector, 5-pin

Environmental data
Ambient temp. (operation/storage) -20°C ... +50°C / -30°C ... +70°C
VDE safety class 6) II, all-insulated
Protection class IP 67
Laser class 2 (according to EN 60825-1 and 21 CFR 1040.10 with Laser Notice No. 50)
Standards applied IEC 60947-5-2

Order guide
Analog current output
1 teachable push/pull output ODSL 9/C6-450-S12 50111157
2 push/pull outputs ODSL 9/C66-450-S12 50111161
Analog voltage output
1 teachable push/pull output ODSL 9/V6-450-S12 50111158
2 push/pull outputs ODSL 9/V66-450-S12 50111162
Serial digital output
RS 232, 1 push/pull output ODSL 9/D26-450-S12 50111159
RS 485, 1 push/pull output ODSL 9/D36-450-S12 50111160
Only switching outputs
2 teachable push/pull outputs ODSL 9/66-450-S12 50111163

Remarks
- Measurement time depends on the reflectivity of the measurement object and on the measurement mode.
- Approved purpose: This product may only be used by qualified personnel and must only be used for the approved purpose. This sensor is not a safety sensor and is not to be used for the protection of persons.

Phone: 800.894.0412 - Fax: 888.723.4773 - Web: www.clrwtr.com - Email: info@clrwtr.com
Analog output: characteristic curve for factory setting

Serial output: transmission protocol for factory setting

9600Bd, 1 start bit, 8 data bits, 1 stop bit, transmission protocol ASCII measurement values

Transmission format: MMMM<CR>

MMMM = 5-digit measurement value in mm (resolution 0.1 mm)
<CR> = ASCII character “Carriage Return” (x0D)

Operation of ODSL 9/D26… with MA2xxi modular interfacing unit

Set S4 rotary switch for device selection in MA 2xxi to switch position “B” (AMS)

(see MA 2xxi Technical description).

Set the serial interface of the ODSL 9/D26… to:

- ASCII (factory setting)
- Baud rate: 38400Bd (see ODSL 9 Technical description…)

Starting at approx. 650mm, measurement value “0” is displayed and 0V is output at the analog output.
